

4-channel AV over IP Encoder/Decoder for HDMI

NJR-T04HD/NJR-R04HD

The NJR-T04HD/NJR-R04HD are a 4-channel HDMI network encoder and decoder set having a built-in scan converter and scaler. This extender transmits 4-channel HDMI signal over one duplex fiber cable, and it supports RS-232C bidirectional communication and LAN transmission. The NJR-T04HD/NJR-R04HD can be used as a 4-input and 4-output matrix switcher or splitter. One NJR-R04HD can configure videowall with 4 or fewer displays and multiple NJR-R04HDs enable videowall with larger number of displays using the sync function.

The NJR-T04HD/NJR-R04HD can be used with other IP-NINJAR products. For example, if the NJR-R01UHD is connected to the NJR-T04HD, 4 full HD video signals that are input to the NJR-T04HD can be displayed as a 4K@60 video signal in a sink device. If the NJR-T01UHD is connected to the NJR-R04HD, a 4K@60 video signal that is input to the NJR-T01UHD can be divided and displayed in four sink devices. (In case the 4K video is protected by HDCP 2.2, the NJR-R04HD cannot display video signals.)

Please use this product with a combination of IP-NINJAR series encoders and decoders. It cannot be connected to OPF series products or FDX.

- *1 x.v.Color, 3D, ARC, HEC, and CEC are not supported.
- *2 The NJR-T04 input does not support UXGA / WUXGA / QWXGA if all the following conditions are met:
 - An NJR-T01UHD or NJR-R01UHD is included in the system.
 - 4K video that is combined video from four full HD output channels of NJR-T04HD combined video and input to the NJR-T04HD is transmitted.
 - The video combination mode of the NJR-T04HD is set to four-window mode (default).
- *3 If only the NJR-T04 and NJR-R04HD are used in the system, the same video format may be output from the NJR-R04HD. Refer to the User Guide for details
- *4 Only CEA-861 timing is supported for 4K input video.
- *5 30 bit/pixel (10 bit/component) Deep Color is supported only for 1-channel transmission.
- *6 8-channel audio is supported when only 1 audio input channel is transmitted.
- *7 The value of the maximum transmission distance was obtained when IDK's cable (AWG 24) was used and 1080p@60 24 bit/pixel (8 bit/component) signals were transmitted. The maximum transmission distance depends on the connected devices. The distance may not be extended with some device combinations, cabling method, or other manufacturer's cable. Video may be disturbed or may not be output even if signals are within the range mentioned above.
- *8 We do not recommend other polishing methods, because it increases the return loss.
- *9 The maximum transmission distance is measured under the following conditions: Fiber that is polished by a recommended method is used, there is no interconnection, and the allowable bending radius is not exceeded.
- *10 For digital systems, some problems, such as an HDCP authentication error, can often be recovered by physically disconnecting and reconnecting the digital cables. However, the Connection Reset feature will fix these problems automatically without the need to physically plug and unplug the cables. It creates the same condition as if the cable were physically disconnected and reconnected. This feature only works for the NJR's output. If other devices are connected between the NJR's output and sink device, this feature may be invalid.
